Abstract

This thesis is based on several chapters, which, after introducing the basic information, go deeper into the topic and develop it further.

In the introduction, I am interested in the genesis of terms used in the work. I analyze their different etymology and geographical use and understanding. Here is a section dealing with the background of rosicrucianism, which freely translates into prominent figures and central writings. The work concludes with introducing the orders and their current activities on the territory of the Czech Republic.
