

Annotation

Bachelor thesis "Experiment with emotions of clients with Alzheimer's Disease," focuses on the issue of Alzheimer's disease. The thesis is divided into two parts, theoretical and research. In the theoretical part, Alzheimer's disease is precisely defined, its causes, consequences, but also the pharmacological treatment and a non-pharmacological treatment is defined in a separate chapter. In the research part, a method of observation is used to collect data, which capture the emotional experience of clients during reminiscence therapy, the acquired data and information are recorded and subsequently evaluated.
