

## **Abstract**

The aim of this work is to evaluate the current procedures and to indicate the development of the cataloging practice towards the RDA rules based on research and analysis of bibliographic production serials in selected Czech and foreign libraries. The diploma thesis is divided into several chapters. After introducing the issue of serial documents follows the chapter devoted to the standards and resources for cataloging the continuing resources that the catalogers should know. The next chapter deals with the FRBR and its application to the serials. Part of the chapter dealing with RDA rules from the serials perspective is also the analysis of these rules according to the FRBR structure available in the RDA Toolkit. Three chapters are devoted to the analysis of bibliographic processing, first in foreign libraries, then in Czech libraries, and in the last chapter there is a comparison of selected periodicals in foreign and Czech libraries. At the end of the thesis are presented the impacts of application of the FRBR model and RDA rules on serials cataloging.
