

Abstract:

This Bachelor Thesis describes different types of pre-school facilities and individual care provided for children in each of them. The goal of this thesis is to find out what the point of view of the parents of the children is on such a topic and to create evaluation. A field research based on personal observation will be made in each of those facilities providing more complex results. The theoretical part of this Thesis describes general definitions of pre-school education and presents different possibilities that exist on the market. The practical part is divided into two parts: survey and own observation (field research).
