

## **Abstract**

In the socialist era, the historical centre and the inner city of Litoměřice were neglected. The development of the town was focused on the development of blocks of flats, which provided facilities especially for young families with small children. In 1989, the socialist regime collapsed in Czechoslovakia, which led to the democratization of the Litoměřice society. Socialist blocks of flats lost their attractiveness of housing. The youngest parts of the city became rapidly ageing. On the other hand, the neglected historical centre and also the inner city of Litoměřice underwent the process of revitalization after 1989. Newly reconstructed apartments became places for life of many young people, thus the process of demographic ageing of these parts of the city has been slowed down. The spatially differentiated age structure of the Litoměřice population has changed since 1989 due to the process of the second demographic transition, demographic ageing and new urban processes. The aim of the thesis is therefore to describe and explain the evolution of the age structure of Litoměřice and its spatial differentiation in post-socialist period.

**Keywords:** age structure, second demographic transition, demographic ageing, revitalization, postsocialist period, Litoměřice
