

Abstract

Title:

Analysis of percentage representation and success of various kinds of offensive hits in beach volleyball

The aim of the work:

The aim of the thesis is to find out the percentage success and representation of various offensive hits in the FIVB Beach volleyball World Tour series of men and women teams.

Method:

The research method was the observation of 24 videos during which I wrote down the necessary data in to a specially prepared chart. By observation and wrote down in to the chart has been gained necessary data for evaluation.

Results:

The results present the success and representaiton of various offensive hits in the men and women categories. They are summarized in text and charts. In addition, the results informed about the proportions of beach volleyball spike hits and beach volleyball technicals hits, or about representation of blocked offensive hits. The results also including comparison of individual performance levels in FIVB World Tour.
