

Abstract

Key words: potential, extinct villages, Bohemian Forest, tourism

This diploma thesis deals with the potential of tourism in the Protected Landscape Area of Bohemian Forest based on evaluation of localization and two chosen implementation factors. First of all, it examines the importance of the resulting potential of a extinct villages in this area. A total of 60 extinct villages are located in the area of interest in the districts of Domažlice and Tachov. Their location, history, population development and current status and information awareness have been studied. In the area of interest are presented its basic geographic characteristics as well as tourism facilities with realization factors. The text of the work is supplemented with tables, graphs, map outputs and also with the actual photographs taken by the extinct municipalities, which are listed in the annexes. The diploma thesis brought the following findings: the extinct villages have little influence on the overall potential of tourism in the Bohemian Forest Protected Landscape Area, but rather only on some local areas, there are no trails that would devote exclusively to the extinct villages in places where their high concentration. In the final discussion, therefore, three routes of potential educational trails for extinct villages are proposed.
