

## **Abstrakt v anglickém jazyce (Abstract)**

The aim of this diploma thesis is to analyze and compare the system of compulsory vaccination in the Czech Republic and in the French Republic.

The first part of this diploma thesis is dedicated to international law context of compulsory vaccination. Relevant international organizations in which is the Czech Republic and also French Republic taking part is described. Then the focus of interest is also on all relevant binding sources of international law, or more precisely on promulgated international treaties, ratified and by which the Czech Republic and the French Republic is bound with the rule that if a treaty provides something other than national law, the treaty shall apply.

The second part of this diploma thesis is dedicated to the connection between compulsory vaccination and constitutional law of the Czech Republic and French Republic, or rather how could be compulsory vaccination justified by the constitutional law of both countries. The case law coming from supervising constitutional institutions related to compulsory vaccination is also examined.

In the third part, the legal regulation of key aspects of compulsory vaccination is examined. The focus of interest is on the amount of regulation made by statute and by secondary legislation. The aim of this part is to find similarities and also differences with its consequences in the legal regulation of both countries.

In the fourth part the way how to force the person to receive the vaccine prescribed by the compulsory vaccination schemes of both countries is examined. Then, the obstacles and sanctions coming from the disrespect of prescribed vaccines is subjected to examination.

The last part, fifth part, is dedicated to analysis and comparison of legal regulation of indemnities for damage caused by obligatory injected vaccines. The focus of interest is on damage neither caused by the default of vaccine nor the medical error. It is subjected to analysis how the both states are coping with the fact, that impose compulsory vaccination causes health damage and how they act to compensate the damage.
