

The bachelor thesis deals with the basic methodology of processing of 103 pieces of chipped stone industry, which were obtained during rescue archaeological research at polycultural site Obříství (distr. of Mělník) in 2008-2011. The results of the morphological analysis of artifacts, their drawing documentation and the layout of the type of used raw materials are presented in a catalog of findings. The evaluated file is also compared with the analysis of files from similar locations in Central Bohemia.
