

## **Abstract**

The thesis shows the approaches of cognitive grammar to the description and analysis of case category's functioning in Czech and Russian languages. Attention is limited to the cognitive grammar as it interpreted by American linguist R. Langacker. Cognitive researches on Slavic languages by L. Janda are also crucial for this diploma. From this point of view the thesis's author studies the interferential phenomena which are typical for Russian-language speakers when they use the Czech language. In other words, by means of conceptual apparatus relevant to cognitive grammar author explains the different use of case category in both these languages.

## **Keywords**
