

Abstract

Title: Common mistakes in men`s giant slalom technigue

Objectives: The main aim of this thesis is processing of exemplary technigue of giant slalom in comparison with common mistakes in giant slalom technigue and the subsequent design of the method of reparation of these mistakes.

Methods: In this thesis research method is used for the analysis of the giant slalom technique and the method of analysis for data processing from the poll. The comparison method is used to compare mistakes or small deviations with the technique processed in theoretic part. An anonymous poll was used to collect data.

Results: Based on the survey, the most common mistakes in the giant slalom men's technique were found in the highest competition in the Czech Republic. By comparing these mistakes with the giant slalom technique described in the theoretical part of the thesis, it was possible to determine the possible causes and consequences of these mistakes and to propose a remedy.

Keywords: technigue, giant slalom, mistake, reparation
