

Abstract

Title: Participation of foreign players on team game performance in our highest competition for women.

Objectives: The goal of this master's thesis is to compare game performance of foreign players with Czech players from season 1998/1999 to season 2017/2018 in the highest Czech basketball competition for women. The partial goal of the thesis is to find out and observe the evolution of number of foreign players participating in above stated twenty-year period.

Methods: In our thesis we used a method of collecting secondary information, which means secondary statistical data analysis.

Results: By data analysis we found out, that foreign players were more effective than Czech players in all monitored seasons while comparing played time and reached index of success. The number of foreign players in the highest league was gradually growing until reaching its peak in season 2014/2015.
