To whom it may concern

Dear Colleagues,

Hereby I would like to appreciate the Diploma work of Mr. Vojtech Tambor with title "Characterization of phosphodiesterase 6 as a cancer-retina antigen".

Mr. Tambor has performed with work under my scientific supervision from October 2006 till March 2007 in our Department, where he was involved in a new project devoted the newly defined group of antigens, namely cancer-retina antigens. In this time he obtained some very interesting data about the aberrant expression of phosphodiesterase 6 in melanoma. Besides he got preliminary data about the effect of phosphodiesterase 6 inhibitors and an antibody against with enzyme on melanoma cell lines. The data obtained are considered to be published in two scientific journals.

In time of his Diploma work Mr. Tambor proved himself to be a good young scientist with a huge potential to begin in future his carrier as independent investigator in bright spectrum of biomedicine. I wish him good luck in his future scientific carrier and I would like to estimate his Diploma work as an excellent one.

Alexandr Bazhin, PhD
