

Farmaceuticky perspektivní látky z chráněných druhů rostlin

Pharmaceutical perspectives of substances from protected plant species

Kateřina Machačná,

Farmaceutická fakulta, Univerzita Karlova v Hradci Králové, květen 2007

The purpose of this study was to investigate the most important herbal species protected by law, which would be utilized in pharmacy in the future. Next assignment was to project potential ways of preservation these protected species.

As the most important species have chosen: *Rhodiola rosea*, *Nuphar pumila*, *Huperzia selago*, *Laser trilobum*, *Veratrum album* a *Veratrum nigrum*.
