

Abstract

The thesis deals with the communication of children with Tourette's syndrome. The first part of the thesis, the theoretical part, defines the basic terms concerning specifically the manifestations of Tourette's syndrome. An integral part of Tourette's syndrome are psychiatric diseases, behavioral disorders and learning disorders that children suffer from. The theoretical part of the text is mainly from the study of literature.

The second part, the analytical part, is composed of semi-structured interviews, with mothers who are willing to share their experiences with children having Tourette's syndrome. All mothers agreed with to being recorded and and anonymous processing of results for the purpose of the thesis.
