

This bachelor thesis is devoted to the area of the Internet photo labs. Nowadays these applications constitute one of the ways of mediating the transfer of digital photographs from the author to print. As digital photographs gain more and more popularity, the role of the Internet photo labs gains more importance. The aim of this thesis is an analysis of the photo labs that are currently available on the Czech Internet. This analysis will focus on the user's possibilities and on several aspects of the technical execution of the relevant web pages. An application which will try to improve current possibilities will be created according to this analysis.
