

Abstract

Title: Socio-economic benefits of Singeltrek pod Smrkem and Rychleby trails

Objectives: The fundamental goal of the diploma thesis is the global introduction of social-economic benefits in the most extensive singletrack areas in Czech Republic – Singltrek pod Smrkem and Rychleby trails. Furthermore based on the comparative analyse of selected variables, to classify identical and differential characters of both destinations and suggest the resolution of detected deficiencies.

Methods: For the data collection and information acquisition for the diploma thesis have been used: documentation as well as comparative observation of watched objects (technical parameters), standardized and unstandardized interviews (trail builders, municipality majors), analyse of information resources (research of domestic and international literature) and especially the methods of comparative analyse (Singltrek pod Smrkem versus Rychleby trails). Data collection resulted from primary as well as secondary external and internal resources.

Results: Diploma thesis introduced the area of Singltrek pod Smrkem and Rychleby trails as the socio-economically important new form of terrain-bikes tourist industry. Based on comparative analyse selected variables further classified identical and differential characters of both destinations and proposed the resolution of identified findings

Keywords: mountain biking, singletrack, Singltrek pod Smrkem, Rychleby trails
