

Abstract

The present thesis is based on lexicographic processing of pronouns for the *Large German-Czech Academic Dictionary (VNČAS)*. Its aim is to identify processing problems in selected dictionaries in the area of pronouns. Based on the dictionary entries proposed for VNČAS will be demonstrated a possible solution to these problems. The identified problems relate to the following areas: grammar in the dictionary, selection of example sentences, dictionary criminality, and user-friendliness of the dictionary.

Key Words: lexicography, pronouns, contemporary German, corpus linguistics, grammar
