

## Annotation

The bachelor essay is oriented on the children injuries problém. It shows the seriousness of this problém and it's basis are the statistical facts of incidence of these injuries. The essay calls attention to the risk factors, that occure because of the unfmished development of children, and adds listing of the most typical injuries and their usual mechanisms of occurance in significant age groups.

The focal point of this essay is a survey about the circumstances of the infliction of injuries. The surveyed sample consists of children that were hospitalized for injuries on the children surgery in the hospital of Pardubice. The survey lasted for eleven months.
