

## **Abstract**

In this diploma thesis I focus on the popular science program for children and youth Meteor, which has been regularly broadcast on radio since 1962. In the opening chapter I am introducing the early years of radiotelephony on our territory - how it gets from the microphone to the telephone handset in the Kbelský tent to the obligatory listening to schools. I also explain the purpose of radio and its effort to spread awareness. For the sake of full understanding it was necessary to state the context of the situation of the 60s to which the Meteor was born. Subsequently, I focus on the history of Meteor, who recently celebrated his 55th birthday, his founders, the main features of the show. In the last part I summarize the current situation and present an interview with the current head of Meteor Petr Sobotka.
