

Abstract

Title: Paralympic classification in table tennis players with physical impairments

Objectives: The aim of this work is to create systematic text by literary research follow up issue about classification in paralympic sport with focusing on table tennis players with physical impairments.

Methods: In this thesis we used qualitative research methods. It is based on the analysis and synthesis of available literature resources, key organizations, and expert consultations.

Results: A comprehensive text about issue of classification in the paralympic table tennis of physically disabled players was created. This work can help national table tennis classifiers of physically disabled players to classify players. In the future, research in this area needs to be carried a way that the classification is truly based on scientific evidence.

Keywords: health impairment, evaluation, paralympic games, classifier, sport classes, eligibility
