The diploma thesis is dealing with the development of the European Union's cyber security policy during the specific time frame since the 1990's until the current time. The thesis is focused on the securitization process, that so, dynamic intersubjective process of threat construction with the aim to find out, to what extent securitization formed the cyber security policy of the European Union. The subject of the thesis is also an analysis of the cyber security narrative topics with the aim to determine which topic leads and if there are changes between them during the research period. In this respect, the model of cyber security discourse variations inspired by the Copenhagen school will be used. In the current thesis will be also introduced the development of cyber threats, its historical contextualization, as well as their gradual globalization.
