

Abstract:

Title: The Case Study of the Physiotherapeutic Treatment of a Patient with Diagnosis a State after the Fracture of Caput Radii

Aim: The main purpose of this bachelor thesis is a processing of a case study of the physiotherapeutic care of a patient with diagnosis a state after the fracture of caput radii on the left side. The Case study was processed during an intership in the CLPA rehabilitation centre. Another purpose is also processing of relevant theoretical informations related to the topic.

Summary: The bachelor thesis is divided into two parts – the general part and the special part. The general part focuses on the theoretical informations related to the diagnoses. These informations were accessed from specialized literature. Anatomy and kineziology of the upper limb were mentioned, orhopaedy and traumatology of elbow and forearm and methods, that can be used during the rehabilitation of these fractures as well. Contain of the special part is a case study of the patient with radial head fracture. It consists anamnesis, kinesiology evaluation in the beginning and in the end of the rehabilitation, which shows the differences and the final effect of the therapy. It also concludes all of the therapy units, that were made.

Keywords: Case study, physiotherapy, fracture, therapy, caput radii, elbow joint, rehabilitation.
