

Abstract

Title: Case report of a patient with a systemic sclerosis.

Aim: The aim of this bachelor thesis is to study and analyse theoretical knowledge about diagnosis of systemic sclerosis and to describe a case report concerned with a patient diagnosed with this disease.

Summary: This bachelor thesis deals with the diagnosis of systemic sclerosis. Theoretical part describes detailed information about systemic sclerosis and its classification into rheumatic disease classification system. Furthermore, the review describes the aetiology of the disease, symptoms and available treatment (specifically non-pharmacological treatment including physiotherapy). Practical part includes the case report of a patient with diffuse form of systemic sclerosis.

Keywords: rheumatology, physiotherapy, Raynaud's phenomenon
