

Abstract

Name of bachelor's thesis: Case study of physiotherapy treatment of a patient with the diagnosis of cervicobrachial syndrome

Prepared by: Viktor Shejbal

Target: The aim of this work is to describe the problems of cervicobrachial syndrome

Methodology: The theme of my bachelor thesis is a case report of a patient with cervicobrachial syndrome. The thesis has two parts, a theory and a specialized part. The theoretical part contains anatomy of cervical spine, epidemiology and etiology of the disease, the symptoms of the disease, the clinical picture, classification, diagnosis and therapeutic approaches to the given diagnosis and subsequent prognosis of the disease. However, the most important part of the bachelor's thesis is the special part, which is to have a proper diagnosis. It contains the work methodology, anamnesis, initial kinesiological analysis, short-term and long-term therapeutic plan, progress record of therapeutic units, final kinesiological analysis and the evaluation of the effect of therapy.

Key words:

Cervicobrachial syndrome, cervical spine, painful vertebral syndrome
