

Abstract

Title: The possibility of leaving the vehicle in a crash in water

Objective: The aim of the bachelor thesis is to create instructions on how to leave a vehicle in case of a crash into water and to find out if there is sufficient knowledge regarding public awareness.

Methods: The main method used was compilation of data and their subsequent comparison. Questionnaire method was used to achieve the next goal of the thesis where respondents completed the survey in electronic form. The last method used was the analysis of the obtained data – written text, videos and questionnaire answers.

Results: In conclusion, a manual was created on how to exit a vehicle after a crash into the water in modified forms for different situations. Analysis of data obtained from the questionnaire showed that there is insufficient knowledge of this issue in general public awareness though it could get better.

Keywords: Vehicle in water, sinking vehicle, sunken vehicle, drowned in vehicle.
