

Abstract

Title: Teaching volleyball in physical education classes at the primary and secondary school

Aims of work: The aim of this thesis was primarily focused on student's knowledge and experience with volleyball at primary and secondary school. A secondary aim was to find out what is the way the teachers teach volleyball.

Methodology: The bachelor thesis was written based on the quantitative method. All data were obtained through anonymous questionnaires from physical education teachers and primary and secondary school students.

Results: The results show that students from primary and secondary schools are interested in studying volleyball in a physical education class. Students have demonstrated knowledge of volleyball rules at a sufficient level and teachers have demonstrated optimal conditions for teaching volleyball in a physical education class.

Key words: Physical education, school subject, student, teacher, framework education programme.
