

Téma diplomové práce	Pharmacological aspects of the treatment of diabetes mellitus
Jméno studenta, studentky	Ampatzis Konstantinos
Jméno oponenta	Radomír Hrdina, M.D.

II. Posudek oponenta

Reviewer's opinion:

Review (literature based) thesis of A. Konstantinos deals with the commonest endocrinopathy - with diabetes mellitus - with the focus on its treatment and future trends. The importance of this disease consists in the fact of accelerating of atherosclerosis and its complications including coronary heart disease - the major cause of morbidity and mortality in developed countries.

The reviewer's opinion is based on data submitted in electronic version (CD). It is necessary to complete printed version by usual and obligatory parts of this type of (diploma) thesis - initial page, content, aim of the thesis, conclusion, summary (list of the abbreviations also should be useful). One should take into account that student had to change his supervisor during elaboration of thesis.

Thesis is written on 71 pages (p.) with good English, furnished with 15 figures and 11 tables. The main drawback of illustrations is that they are not accompanied with numbering and legends.

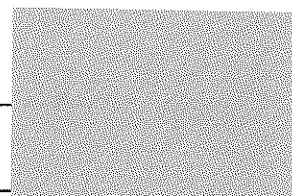

Formal comments:

- p. 11, last paragraph - b-cell of Langerhans islets: beta-cells
- p. 20, last line: units of blood pressure are omitted
- p. 22, last paragraph (and elsewhere): SI units should be used instead of units used in the U.S. (e.g. kg instead of pounds, mmol/l vs. mg/dl, etc.)

Questions and major comments:

- p. 7, bottom: what does abbr. THE mean?
- major point of criticism concerns references and their citations: the bibliographic citations must be complete with all necessary items (author/s), place and date of issue, pages, etc.); the references must be cited in the text! Also number of references for review thesis should be more comprehensive. The final result of opinion suppose to complete these missing items in the print versions of thesis.

In spite of the above-mentioned comments I recommend the thesis of A. Konstantinos to the Committee for the defence.

Navrhovaná klasifikace **very good**
