

Abstract :

The Master's thesis aims to describe the method and specifics of expressing the degree of accuracy of time expressions in the written works of non-native speakers of Czech.

The diploma thesis focuses on the general description of the expression of temporal quantification by non-native speakers of Czech in written texts. Based on specialized resources, the graduate defines time indicators, in the next step she analyzes the most frequently used text book series entitled Czech for foreigners - Czech step by step by L. Holá, in which she monitors the presentation of time expressions, both grammatically and lexically, in terms of the range of indicators with regard to the level of language acquisition, but also in terms of the way of presentation of the indicators. In the following part, an analysis of the occurrence of time indicators in the Merlin students' corpus is performed. The scope of use of time indicator is monitored with regard to the language skill level according to SERR, the degree of accuracy of the indication of time quantification, and the error typology of time means.
