

The title of the thesis is „The methods of molecular biology in the court genetics as a topic of a specialized lesson on a high school".

The thesis considers the problematics of molecular biology methods that are used by the court genetics. It describes the respective methods and techniques utilized in the criminalistic routine.

The work is split into six main chapters.

The first, introductory chapter includes hypothesis and sets down the goals of the thesis.

The second part dwells on the methods of molecular biology. It mentions the basic information on DNA, methods and technologies used in criminalistics. Each subchapter attends to one method or technique.
