Year of the defence:	2020
Keywords:	Health, Prevention in healthcare, Oncological prevention, Preventive examinations, Screening

Bachelor's thesis focusing on the topic of the adult population for preventive examination. The theoretical part is presented in three chapters. The first chapter deals with health issues, determinants of health and a healthy lifestyle. The second chapter focus on prevention in health care and clarifies primary, secondary and tertiary prevention, and the third chapter is devoted to oncological prevention.

The empirical part presents quantitative research and is processed by the method of questionnaire survey. 80 respondents participated in the research part. Obtained informations are transferred to tables and graphs. The aim of the work was to find out with what willingness the public is interested in their health, what knowledge the public has about preventive examinations and from where they obtain informations about the possibility of undergoing preventive examinations.
