**Keywords:** Cervical cancer, risk factors, prevention, education, health literacy

The bachelor's thesis deals with women's awareness of risk factors and options for prevention of cervical cancer. The theoretical part points to general information about cervical cancer, risk factors and prevention. It also deals with the process of education and health literacy.

The empirical part of the work consists of a quantitative questionnaire. The research focuses on women's health literacy in cervical cancer, risk factors, prevention and vaccination. It also focuses on whether they are sufficiently informed and educated about cervical cancer. As part of the research, 140 questionnaires were distributed. A total of 139 of these questionnaires met the criteria for inclusion in our research survey and were subsequently evaluated. Based on the results of the research survey, an educational brochure was created, which contains the most important facts about cervical cancer, including prevention.
