

Subject matter of the diploma thesis is an analysis certain areas of auditive perception by pre-school children. Concretely, the matters of the thesis are syllable analysis, synthesis, auditive discrimination, rhymes, sound analysis, synthesis and handling in phonetic word structure. In this diploma thesis I have focused my attention to the problems of auditive perception in specified intact group of pre-school aged children before their entry to compulsory school attendance. Base for the study are pieces of knowledge from related list of resources. The conclusions this survey are based on quantitative assay of children in day nursery school.

Key words: auditive perception, areas of auditive perception, phonemic and phonologic awareness, phonemic ear, diagnostics of auditive perception
