

The aim of my diploma paper is to analyse the question of relation valuable orientation members of Junak to the future, section of expectation and wishes of their parents. The theoretical part concentrates on the demarcation of ideas of personal value, valuable orientation, time perspective and explanation of value, ideals and elements which form scout's movement. There are also presented results of research from Mgr. Pavel Černý, in which this work continues.

The pairs-individual/scout + his/her parents are respondents of my research. It includes 3 men and 7 women and their mothers (none of the fathers were participants in the research). I show parental expectations, wishes and calculations in relation to the future of their children and also expectations, wishes and calculations of these children in relation to their own future in the exploratory part of my Diploma work.
