**Průběh obhajoby:** Vendula motivated her presentation by the overall 8th SDG goal and suggested six main research hypotheses. She then stressed four main areas of the contribution of her work. The details of the dataset with its specifics (missing data, panel structure) were presented. Three empirical models were presented, and the methodology of panel data regression together with appropriate tests. FE model was finally chosen, and the numerical/statistical results were interpreted. ETS and ARIMA were used for short-term forecasting. Finally, factors influencing the GDP growth and unemployment rate were summarized together with comments on other hypotheses. The committee asked questions related to the contribution of the thesis related to the current literature, interpretation of the insignificance of all explanatory variables in the domestic material consumption model and the overall endogeneity issue, the potential impact of the covid-period in 2020 data, the relation of the Recovery and Resilience plan, and its connection to SDG 8th goal. Finally, the committee asked about the discrimination between the FE/RE/pooled analysis. The student was able to discuss these topics well.
