Number of pages: 165

Number of appendixes: 7

Year of defense: 2021

Keywords: quality of life, intestinal stoma, ostomy, nursing care, WHOQOL – BREF, Stoma – QOL

The bachelor's thesis deals with the quality of life of patients with intestinal stoma. In the theoretical part, basic information related to the issue of stomas is interpreted, the concept of quality of life and the specifics of nursing care in patients with intestinal stoma are defined.

The empirical part focuses on the results of the quantitative questionnaire survey, for which the standardized WHOQOL – BREF questionnaire and the Stoma – QOL questionnaire were used. A total of 144 respondents with intestinal stoma participated in the survey. Subsequently, in this part of the bachelor's thesis, the set goals are discussed, where the values of quality of life are compared with the population standard. Furthermore, the empirical part of the thesis focuses on the influence of selected variables, type, and time of foundation of stoma on quality of life and mapped the concept of a specific quality of life of patients with intestinal stoma.
