Number of pages: 115

Year of defense: 2021

Keywords: breast cancer, breast cancer, breast cancer in adolescents,
education of adolescents, problems of breast cancer, health
literacy, adolescence

The bachelor's thesis deals with the education of adolescents in the prevention of breast cancer. The theoretical part includes the anatomy and physiology of the breast, the division and description of cancers. We also described the TNM classification, clinical symptoms, diagnosis, treatment, nursing care and risk factors. In the next part, prevention, adolescence, health literacy of adolescents, issues of education were mentioned.

The empirical part consists of a quantitative questionnaire survey. The questions concerned self-examination, doctor's visits, risk factors and ways of communicating this information. The data were compared with some previous surveys. Based on the research results, an educational material was prepared.
