

## **Abstract**

This bachelor thesis deals with geological localities of the Pilsen region. The first part of the thesis deals with the didactic basis – describes the real form of the geology curriculum at primary school, defines the didactics of geology and the issue of excursions. The second part deals with the geological structure of the Pilsen region and presents two specific proposals for excursions. The thesis also includes worksheets with author's commentary for teachers and tutors. The created materials from selected localities can serve as a supplement to deepen the knowledge and skills acquired at school.
