

Abstract

Title: Swimming level of pupils of urban basic schools and village basic schools

Objectives: The aim of this work is to evaluate the records of the monitored records of input and output values of the swimming level of children of younger school age in compulsory swimming lessons at primary school. The basic criterion for the assessment will be whether the children will complete swimming lessons as part of their education at a city school or a village school. The results will be monitored in children of different classes and boys and girls.

Methods: In this work, I used a mixed type of research, in which I used both qualitative and quantitative research of this problem. The qualitative part of the work is based on the study of available literature, respectively the study of printed and electronic sources. The qualitative part is based on the examination of the material, teaching records from teachers at the swimming school Aquasvět Chomutov. Data obtained from these materials were analyzed using descriptions, graphs and tables. The researched data were collected during the school year 2018/2019. The evaluation of the documents took place in 2020.

Results: The result shows that there is no significant difference between the performance of urban primary school pupils and rural primary school pupils.

Keywords: swimming lessons, younger school age, city schools, village schools
