

Abstract

Title: Financial plan for the construction of a beach volleyball complex

Objectives: The main objective of the work is to create a beach volleyball complex, which is adapted on the basis of the criteria of the Fédération Internationale de Volleyball with the aim of organizing world circuit tournaments, and its financing during construction.

Methods: In this thesis is used an analysis of primary and secondary data and their subsequent comparison with comparative method. In case the data cannot be analyzed, because they are not publicly available, informal interviews with selected respondents are used. All of whom are anonymous.

Results: The result of the thesis is the proposal of the construction of a complex in the capital city of Prague, which meets all predetermined conditions. It also includes a proposal for financing the complex, which allows its construction with the help of selected financial sources. The financial budget for the construction was set at a total of 53 million CZK. Possible sources are investors, a business loan, and especially subsidies and grants from the state, city and region.
