Title: The usage of visceral manipulation on the patients with vertebrogenic disorders

Abstract:

This bachelor thesis will be focusing on the osteopathic method of visceral manipulation, specifically its usage on the patients with vertebrogenic problems. The vertebrogenic problems are the second most common causes of a doctor's visit. However, determining the cause and source of the problem is not always easy and the patient is often referred for an examination and treatment to the various specialists, unfortunately mostly without any effects. Visceral manipulation looks at with the vertebrogenic disorders in the context of viscerovertebral relations and in therapy it focuses mainly on the organ system. The knowledge which the VM offers could thus be a way of treating these problems. This thesis is divided into the theoretical part and the practical part. The theoretical part is further divided into two main sections. The first one is focusing on the vertebrogenic difficulties and the viscerovertebral relations. The second section is focusing mainly on the VM method itself. The practical part contains two diagnostic cases of vertebrogenic patients. The main goal of this thesis is to provide the appearance of the VM method.

Keywords: vertebrogenic disorders, back pain, visceral manipulation, osteopathy, manual therapy, fascia
