

Abstract:

In this master thesis I want to focus on high rank executives in the National Bank of Czechoslovakia. between years 1938– 1953. These employers are important to me, because they were educated during the time of Austro-Hungarian empire or during the time of The First Czechoslovak Republic. They also had to work under nazist economic system and under communist economic system as well. These interactions between employers and both regimes are the ones that I would like to study in my master thesis. I would also like to study their social background. Their place of birth was also important. It is important to know their skills in foreign languages. Foreign languages were necessary for communication between the bank and other financial institutions.

Key words:

The National Bank of Czechoslovakia, banking, nazism, communism, social history, bureaucracy, economic system
