

Activities of mother centres in Czech Republic are getting more and more into the peoples mind. There are many programs going on in the mother centres. One of them is education for adults, which has many varieties and consequences.

In my study I am introducing mother centres like non-government, non-profitable organizations, which are natural and meaningful part of civic society. I am characterizing people who are clients of mother centres or its active employees. I am introducing education for adults in mother centres in its full scope. I am presenting all the forms, methods, contents and personal support and financing of education.

In the end of my work is highlighted the importance of education for adults in mother centres for an individual and for the whole society. In my study I am trying to point out how important for development of personality is active commitment and positive meaning of active work for the others.

When preparing the study I used special literature and my personal experience of working in the Family and Cultural Centre Nová Trojka, where organizing of educational events was a part of my work.
