

The achievement of my bachelors work is to describe the changes in the German Charles University in Prague during the second world war. The main topics that I am to describe are personal changes either racial clean outs or the slower and less dramatic changes because of political reliability to the Germans.

I am also going to write about the new subjects that were entered because of the new political climat.

I will describe these with help of H. J. BEYER, who, being collaborator of SD, was an interesting example of young and ambitious teacher, who did not hesitated and took all the advantages, that the new systém at the University offered to a politicaly loyal person like him.

He uses his position to discredit those of his colleagues, that could threaten his career.
