

## **Abstract**

This bachelor's thesis deals with the topic of principals' view of the use of digital technology in primary school education. The theoretical part of this work approaches the issue of digital technology in education and certain types of technology used by teachers and principals are described in this part. Furthermore, the thesis deals with advantages and disadvantages of the use of technology in school education, and the concepts of "Bring Your Own Device" are approached.

In the practical part, qualitative research was held in the form of a semi-structured interview with four school principals about their views and experiences with the use of digital technologies in education. This work aims to find out how different primary school principals approach the modernization of teaching by using new technologies.
