

Resumé

Title:

The analysis of scoring goal in football on the basis of World Championship 2006 in Germany.

Work objectives:

My work objective is to analyze the scoring goals based on detailed watching of all the matches of World Championship 2006. The players and teams in the offensive part of the play are studied, especially in the line of attack. The main purpose of the study is to reason out the model situation leading to breaking through the defensive line successfully scored by a goal (in open play), and to find out what the requirements on the particular players are and to use the gained information in practice.

Methods:

The research was accomplished by indirect observation from videocassette showing all goals scored at the World Championship 2006. The qualitative and quantitative analysis was used for this research. There were followed all the criteria of performance of successful shot. The graphic demonstration of representative goal situation has showed us the models, which we can break in to the training process and transfer to another performance group.

Results:

The results show us which models of successful offensive play were used at the world championship. Also the possibilities of strategy which lead to scoring a goal were introduced and so the frequency of appearance of the partial factors.

Key words:

Football, scoring goal, structure activity, qualitative and quantitative analysis.
