**Title of the thesis:** Possibilities of resocialisation for people with bilateral amputation.

**Department:** TVPVZP

**Supervisor:** Doc. MUDr. Jan Kálal CSc.

**The year of presentation:** 2008

**Abstract:** The target of the work is a presentation of comprehensive look at the rehabilitation after bilateral amputation. The walking with prosthesis by people with bilateral amputation is very difficult. The inquiry proved that in given collection is 48 % able to effective locomotion but only for short distance. In connection with it the work pursues with status of bilateral amputated persons and with the options of their resocialisation. It works by the methods of questionnaire and their evaluation. The hypothesis that the bilateral amputated person is under certain condition able to partial resocialize is in the end of the work acknowledged.

**Keywords:** Bilateral amputation, rehabilitation, artificial limb, prosthesis, resocialisation
