

## **ABSTRACT**

The diploma thesis deals with the topic of further education of teachers in the field of digital competencies from the perspective of educational management. This subject was chosen not only of its topicality, but also due to the strategic dimension of further education of teachers and their digital skills, which reflect the key documents of MŠMT.

The theoretical part of the diploma thesis focuses on theses related to educational management, further education of teachers and ends with a chapter dealing with digital competencies. The research part of the diploma thesis pays attention to the offer and demand of further education of teachers and the reflection of digital competencies of teachers through qualitative research and data analysis. Specifically, the research survey consists of semi-structured interviews conducted with primary school teachers in the capital city of Prague, analysis of data from the Teacher's digital competences framework and analysis of selected websites collecting the offer of further education of teachers.

The aim of the diploma thesis is to analyze and critically evaluate the offer and demand for further education of teachers in the field of digital competencies and to reflect the current digital competencies of teachers that they use in practice.

## **KEYWORDS**
