

Abstract

Title: Rescue interventions in winter and on ice

Objectives: The aim of the bachelor's thesis is to solve and describe the interventions of rescuers on frozen water levels and specifically the analysis of work on ice, including possible risks and dangers threatening the performance.

Methods: The methods used to gather essential information on rescuers' interventions on the frozen surface were carried out through a survey of study sources, available literature and the subsequent processing of the search.

Results: Description of rescuers' interventions on frozen water levels, description of the means used in interventions and description of possible risks and dangers.

Keywords: intervention, lifeguard, ice, winter, rescue
