

## **ABSTRACT**

This bachelor thesis is concentrated on clients of Klíčov Care Centre Boarding school department for a period of 15 years, from 2005 to 2020. Objective of this bachelor thesis is to map the development of client's profile of this Care Centre when considering possible changes in basic attributes of behavioral disorders. Bachelor thesis is divided into theoretical and practical part. Beginning of theoretical part is devoted to description of Klíčov Care Centre, its history and all forms of offered services. This thesis deals with behavioral disorders and their basic characteristics. Next part focuses on the individual stages of child development with regard to the possible disorders development. Practical part is devoted to SVP Klíčov Boarding school client's profile. Necessary data was obtained by thorough comparison of annual reports and statistics of SVP Klíčov. Processing of obtained data sets led to creation of several profiles of client of SVP Klíčov. The described profiles reflect evolution of client's behaviour in respect of development cultural and social norms. Differences in the client's profile are presented in four case studies. Data collected for this work showed that most common cause for child placement to the SVP Klíčov Boarding school are problems at school. However, it was not possible to precisely determine whether the main causes of the child's failure at school are SPU, SPCH, ADHD, social and mental immaturity or just low frustration tolerance.
